

Jay Coughlan

250-508-7413 – jaycoughlan.com - JayCoughlan@protonmail.com - Victoria, BC, Canada

> Technical Skills:

- **Programming Languages** – C#, C++, Python, PHP, Javascript, HTML + CSS, React
- **System Administration Tools** - Windows Powershell, Node Package Manager, Bash
- **Technical Tools** – Unity3D, Git, GitHub, Jira, Visual Studio Code, Office360

> Job Experience:

> Checkfront (*March 2018 – Current*)

Jr Software Developer (2024 – Current)

- Worked on both **backend and frontend** of our highly available booking platform
- Part of an **Agile** team with **developers, product managers, and designers** to create new features
- Participated in code reviews with the team to ensure **high quality** and **performant** code

Technical Support Analyst Lead (2022 – 2024)

- Developed and **documented TSA and TSS processes** for team training and reference
- **Owned and developed** internal tool to automate processes using PHP (*See: Project - Support Stakeholder Notify*)
- Trained customer facing teams on bug ticket creation in Jira and troubleshooting our GetYourGuide Integration

Jr QA Automation Developer (2021 – 2022)

- Provided QA Support within an **Agile Team** structure
- **Owned and developed** internal tool to automate QA processes using PHP
- **Voiced insight and opinions** on how customers use our product to help improve testing and design

Technical Support Analyst (2018 – 2021)

- Published code to the Checkfront platform following company development processes
- Used **advanced troubleshooting and debugging skills** to investigate interesting and challenging issues
- Provided support and for internal team-members

> Absolute Software (*Jan. 2016 – Sept. 2016*)

Hosting Ops Jr. Co-Op

- **Owned and developed** internal dashboard application using Selenium and C#
- **Owned and developed** internal scripts to manage passwords on systems using Powershell
- Compared various products and **handled business communications** for potential use

> Projects:

> Neon Roar (*Personal Project*)

A retro-style video game based on favorite, popular titles from the Sega Saturn. Play as one of four characters each with a different gameplay style in a Neon-Punk, 80's horror style world.

- Built using **Unity 3D** and **C#**
- Worked asynchronously with a team of creators, including other developers, artists, and project leads
- Current ongoing project in my spare time

> Support Stakeholder Notify Script (*Checkfront*)

Technical Support Analysts need to follow up on all Zendesk tickets attached to a deployed bug fix. The goal of this project was to automate re-opening the Zendesk tickets, saving time and reducing busy work.

- A PHP tool to re-open support Zendesk conversations attached to deployed Jira tickets
- Automatically re-open and apply a generic internal message to all tickets, assign tickets to last agent, and only follow up once if operator reached out multiple times
- Two-Month project between other support responsibilities

> Moon Child Game (*Vancouver Film School*)

Our final project at Vancouver Film School was a short game experience developed as a team. Our goal was to build a third-person platformer with two levels, voice acting, and enemy AI.

- Worked as the sole programmer on five-person team using **Unity 3D** and **C#**
- Third person platformer with traditional and runner mechanics
- Dedicated four-month production cycle

> Education:

> B.C.I.T. (Jan. 2015 – May 2017)

- Diploma for Computer Systems Technology
- Completed BCIT's co-op program at Absolute Software (Jan 2016-Sept. 2016)
- Learned the principals behind multiple programming language types (Object Oriented, Interpreted, Procedural, etc.)

> Vancouver Film School (Oct. 2011 – Oct. 2012)

- Diploma for Video Game Design
- Main programmer on my team's three-month final project, 'Moon Child'
- Learned many facets of the game design process and documentation
